

CST announces expansion of portfolio

Building on its 125+ year legacy as the world's leading bolted steel tank, silo and aluminum dome manufacturer, CST continues to lead the industry by modernised ordering and production methods that deliver new efficiencies and rapid project completion – saving time and money, making customer' jobs easier.

CST's legendary product portfolio continues to expand with its Vulcan™ by CST, a pre-engineered, pre-configured flat-panel bolted storage tank line. Backed by industry-leading technology and experience, the Vulcan by CST SelectCoat™ and DuraCoat™ epoxy-coated 'fast tanks' are available in capacities of 15m³ to

3000m³ and are specifically designed to be the perfect storage solution for the municipal water, wastewater and fire-protection markets. Since the tanks are pre-engineered, they are available through a simplified ordering process, allowing for fast selection and best-in-market delivery times. Like CST's other bolted options, the tanks are built from the ground up to allow for safer construction. SelectCoat and DuraCoat are factory coated in environmentally controlled conditions for quality and durability. DuraCoat is designed to Eurocode and is manufactured in an ISO-certified facility.

The new product line offers locally based storage solutions to Europe, Asia-Pacific, Latin America, Middle East and Africa. They are constructed and put into operation faster than any other liquid storage system and are currently available with trough decks and low-profile roof options and accessories.

'We are excited to introduce these advancements in economical storage solutions and production lead times,' says Tim Carpenter, CEO of CST Industries. 'Vulcan by CST provides the perfect storage solution for these liquid applications where custom-designed tanks are not required and yet our users still get great performance that they expect from the industry leader.

We are pleased to ensure that all customers are able to get storage solutions designed and built to their needs – and the new Vulcan by CST products help CST continue superior support all over the world.'

'Vulcan by CST provides our customers with readily available, pre-engineered bolted tank options and allows CST's seasoned professionals to evaluate client needs and offer recommendations that leverage delivery models – subsequently accommodating customers budget and schedule – while not over compromising when they don't have to,' says Matt Gregg, Global Vice President of CST Industries.

The new Vulcan by CST SelectCoat and DuraCoat epoxy coated tanks are a modern advancement and an unequalled choice for pre-configured storage tanks. For customers that require custom-designed applications, CST provides its premium epoxy-coated storage solution, the industry-leading TecTank™, built to customers' exact specifications and available in flat panel, chime panel or factory welded designs. Specialising in above-ground liquid and dry storage tanks, silos and dome roofs, CST is known as the industry leader serving no fewer than 15 markets worldwide.

Refurbished ARFF for Derry

Sheffield-based FB Fire Technologies Ltd (FireBug), renowned for its water-mist firefighting and rapid-intervention vehicle technology has delivered a Cobra 2 ARFF fire tender to the City of Derry Airport following the completion of the vehicle's

mid-life refurbishment at the company's new fully equipped Malvern facility.

The FireBug UK facility is located in the heart of the Midlands and offers servicing, support and expansive firefighting vehicle manufacturing facilities. The company also designs and manufactures bespoke co-polymer firefighting vehicle bodies. FireBug UK has a highly skilled workforce with a combined experience in the fire-engine industry spanning over 150 years. With a Dubai based facility the company is well positioned to service its Middle Eastern, Asian and African customers.

Simon Pitt, Technical Director at Firebug UK commented, 'The company are proud to have been selected by the City

of Derry Airport to complete the midlife refurbishment on their Cobra 2 ARFF vehicle following the collapse of CSS Worcester in 2018. The tender was completed on time, with approvals being conducted at the Millbrook Proving Ground and returned to the customer in November 2018.'

FireBug UK are now able to offer a full range of support services, co-polymer bodies and an extensive range of firefighting vehicles and equipment to customers' exact requirements. In the coming months, FireBug UK will be releasing details of some new and exciting projects.
